## RECOMMENDATIONS FOR USE

- It is the responsibility of the end user and not the manufacturer to determine glove suitability for the intended use.
- Not recommended for use with liquid chemicals. Do not use near moving machines if there is a risk of entanglement. The glove may lose its insulative properties when it becomes wet.
- Gloves should ideally be stored in cool, dry conditions in original packaging and away from direct sunlight.
- Both new and used gloves should be thoroughly inspected (especially after cleaning), before being worn to ensure no damage is present. Gloves should not be left in a contaminated condition if re-use is intended. In which case gloves should be cleaned as far as possible, provided no serious hazard exists, before removal from hand. Excess contamination should first be removed and the gloves may be decontaminated with mild detergent solution then rinsed with clean water and dried ideally with some air movement.
